(A) IMMEDIATE RESULTS

I. Introduction:

On 14th June 2025, The Future Compass Team successfully organized a project titled “**Panel Discussion on Science & Social Science Pathways**” at Indratevi High School in Phnom Penh.

This project was fully funded by YRDP and aimed to help Grade 11 students better understand the differences between the fields of science and social science. The event empowered students to make informed decisions about their future studies and careers by connecting them with professionals from both fields. Through this engagement, students explored how their personal strengths and interests align with current market demands, helping to bridge the gap between academic choices and employment opportunities, while also fostering personal growth and community development.

The half-day event was designed as a small-scale, interactive discussion targeted at Grade 11 students in Phnom Penh. Out of 58 registrations, 50 students were selected by the school management team to participate. The project focused on clarifying key distinctions between science and social science, encouraging students to reflect on their abilities and aspirations in relation to real-world career paths. Ultimately, the goal was to support students in making thoughtful major selections that balance both their passions and future job market needs.

II. Qualitative Results of this event:

- Students were very active and asked 15 good questions during the panel discussion and Q&A.
- 3 female and 2 male students asked questions during the live session, showing they were confident and interested.
- Most questions were about university life, how to plan for the future, and the difference between science and social science in Cambodia.

- Some students felt comfortable enough to raise their hands and ask questions during the talk.
- 10 more questions were sent through sticky notes by students who were too shy to speak out loud.
- Many questions showed students needed help choosing a major and thinking about their future career.
- Students were curious about how science and social science can help solve real problems in Cambodia.
- One female student asked about the challenges for women in science careers.
- A student asked when they should start planning for their career, showing they are thinking ahead.
- A few students asked about money, like scholarships and which jobs are more stable.
- Students were also curious about how the guest speakers became successful in their jobs.
- Some students said they felt more confident after the session.
- The students liked the way the event was held and enjoyed the open talk format.
- Some questions mentioned Cambodia's job market, showing students were connecting the talk with their real life.
- Overall, the students felt supported and were happy to share their thoughts.
- At the end, the team took group photos to wrap up the event.
- At the end of the event, our organizing committee team had group photos together

(B) PROBLEM/ CHALLENGE		(C) SOLUTION /JUSTIFICATION
I realized that the internal receipt I submitted was filled out by myself instead of being properly issued and signed by the teacher at school. This may not meet the official school requirements.		To fix this, I asked the responsible teacher at school to issue and sign a new official internal receipt. Then, I replaced the old one with the correct version.
(D) OBSERVATION/ COMMENT		
During the project implementation, our team has met a lot of obstacles, but due to our perseverance together as a team, we finally can manage to solve those problems successfully. The event day took place at the INDRADEVI high school and went on smoothly and thank you so much from the Funder YRDP that provided us money and food for this event. And the participants seem to enjoy our workshop presentation because the topic is really matching with their needs. Finally, all of these activities wouldn't be going smoothly like this without your support from YRDP.
